The presentation strikes a balance between formalism and application, between abstract and concrete. The interconnections among the various topics are clarified both by the use of vector spaces as a central unifying theme, recurring throughout the book, and by putting ideas into their historical context. Enough of the essential formalism is included to make the presentation self-contained.

See, I Told You So Rush Limbaugh 2021-06-26 Rush Limbaugh, America's #1 radio talk show host and #1 New York Times bestselling author presents a collection of the political and social observations conservatives have come to love and liberals love to hate. Limbaugh, a consummate entertainer and provocative political commentator, who delighted in being called "The Most Dangerous Man in America," led the charge to embrace and defend the fundamental values that have shaped the American character—the same values that cause liberals to have conniptions. The Democrats may be in the White House—but even they can't ruin this country in only four years, proclaims Rush. Conservatism's most outspoken champion and ever the optimist, Rush viewed the "pernicious liberal movement" as a philosophy whose inevitable demise will lead us back to the values that made America great. A must for the politically incorrect, See, I Told You So captures Rush at his best—showing once again why his syndicated radio show reached millions of devoted listeners each week.

The Sea Island Mathematical Manual Frank J. Swetz 1992 An annotated translation and analysis of the Haidao Suanjing, a Chinese mathematical classic composed by Liu Hui in A.D. 263. All ancient societies practiced the art of land surveying. In fact, tradition tells us that geometry--land measure--had its origins in such surveying. However, an examination of early Western literature reveals few records concerning the practical uses of geometry and mathematics in the tasks of surveying. Recent research into the content and origins of early Chinese mathematics is beginning to reveal the existence of strong traditions and interest in the methodologies and applications of land survey. It is from these Chinese sources that a clearer picture of how people adapted mathematics and geometry to the needs of surveying emerges. The Haidao Suanjing, or Sea Island Mathematical Manual, is one of the "Ten Classics" of traditional Chinese mathematics, and its contents demonstrate the high standards of theoretical and mathematical sophistication present in early Chinese surveying theory. The Haidao established the mathematical procedures for much of East Asian surveying activity for the next one thousand years. The contents of the Haidao also testify to the ability of the Chinese to systematize mathematics and hint at the use of proof in Chinese mathematics, a concept usually associated with Greek mathematical thought. Frank Swetz provides an analysis of the Haidao's surveying problems. In particular, he details surveying techniques and undertakes a mathematical exposition of the Chinese chong cha solution procedures. The Haidao is a testimony to the ingenuity and skill of China's early surveyors and its author, Liu Hui. This study complements and extends the findings of Swetz's previous book, Was Pythagoras Chinese? An Examination of Right Triangle Theory in Ancient China.
