Value-Driven Intellectual Capital Patrick H. Sullivan 2000-03-10 How do firms like Hewlett-Packard, DuPont, Dow Chemical, IBM, and Texas Instruments routinely convert the ideas of their employees into profits that sustain the corporation? How can buyers and sellers calculate the assets of the acquired firm in a merger or acquisition? How can an organization affect the firm's stock price using the leverage of intellectual assets? Identifying a firm's assets, especially its intellectual assets-the proprietary knowledge expressed as a recipe, formula, trade secret, invention, program, or process-has become critical to a company's overall vision and strategic plan and essential in such transactions as stock offerings or mergers. In the era of the knowledge-based company, where the firm's genius and future lies in its ideas, a firm's collective know-how has become a measurable commodity-and as much a part of its bottom line as the condition of its cash investments, plant, and equipment. Extracting and measuring the real value of knowledge is essential for any corporate head who knows how high the stakes have become for corporate survival in the information age-where the innovative idea is as good as, if not better than, gold! Value-Driven Intellectual Capital is a corporate and financial executives' handbook to the new world of intangible assets-what they are and how to convert them into cash or strategic position. Written by one of the seminal thinkers in the field, and the key organizer of the ICM Gathering, a group of leading-edge knowledge-based companies, Value-Driven Intellectual Capital explains the new, boundary-expanding world of intellectual assets-where translating an innovative idea into bottom-line profits involves a tightly focused strategy with clear directives for making it happen. A blueprint for turning corporate knowledge, know-how, and intellectual property into a sustainable competitive weapon that will build a firm's reputation and market share, this practical, insightful book outlines: * Basic concepts underlying IC (intellectual capital) and corporate value creation * The linkage between IC, business strategy, and profits * The different kinds of value-including qualitative and quantitative -firms realize from their IC * Activities required to produce the value firms desire from their IC * Methods for calculating the dollar value of companies-for market capitalization and mergers or acquisitions * An economic model of an IC company The book's appendix is a valuable distillation for corporate and financial executives, managers, researchers, and analysts of IC's basic working concepts and definitions, including the principles underlying value creation and value extraction, the concepts and strategies used by successful companies, the sources of value for knowledge companies, and the mechanisms used to convert that value into real profits. And since it is managerial talent that turns intellectual

property into business assets, the book provides an arsenal of key concepts, methods, and processes for aligning with and using intellectual property as an active element of a firm's business strategies. It concludes with a discussion of how value is extracted from human capital, focusing on its elusive magnetic core: creativity and productivity. In an era in which firms are increasingly accountable to shareholders and success is judged solely by stock price, knowing how to measure and extract the value of a firm's intellectual assets has become one of the most critical and essential skills needed by CEOs today. Reflecting the most innovative thinking from some of the most sophisticated firms in the world, Sullivan's Value-Driven Intellectual Capital is a manifesto, a clarion call to excellence for any corporate or financial executive, merger and acquisition partner or investor who understands how much future corporate survival and success depends on the simple enduring genius of a good idea and the need to convert those ideas into corporate value. Earthmovers in Scotland: Mining, Quarries, Roads & Forestry David Wylie 2016-11-04
As Scottish Correspondent for Earthmovers Magazine, David Wylie has enjoyed privileged access to the mines, quarries, road projects and forestry sites across Scotland. On his visits he has seen some of the biggest and arguably the best, earthmoving machinery in the world, in action. Earthmovers in Scotland brings together 32 of David's reports from these visits to tell the story of the highly skilled, experienced owners, drivers and managers that work with earthmoving equipment and explains why they select, maintain and operate these machines. The book features some of the largest earthmovers in the UK, such as Caterpillar's D11R bulldozer, Liebherr's massive 320 tonne R9350s and the mighty 520 tonne Q&K RH200 at Banks Mining Shotton surface mine in Northumberland, a short hop over the Scottish border. It also takes a look at a 1.5 tonne mini digger, special trailers that can lift and transport 1800 tonne bridges into position, and covers Demag's H485 record breaking mining shovel amongst others. Taking pride of place in the book are over 400 stunning photographs, many of which have not been seen before and many of which feature machines that were the first of their kind. Each high quality photo has been carefully composed to capture each machine in all its power and brilliance with the spectacular Scottish scenery as a backdrop and 80 of the most important and detailed images are presented as double pages to help you get close to the action. This beautiful book sets out to provide its owner with a comprehensive look at Scottish earthmovers scene, and will be of interest to enthusiasts, owners, drivers and site managers worldwide.

Designing the T-34 Peter Samsonov 2019-12-27 When the German army launched Operation Barbarossa – the invasion of the Soviet Union – on June 22, 1941, it was expecting to face and easily defeat outdated and obsolete tanks and for the most part it did, but it also received a nasty shock when it came up against the T-34. With its powerful gun and sloped armour, the T-34 was more than a match for the best German tanks at that time and the Germans regarded it with awe. German Field Marshal von Kleist, who commanded the latter stages of Barbarossa, called it “the finest tank in the world”. Using original wartime documents author and historian Peter Samsonov, creator of the Tank Archives blog, explains how the Soviets came to develop what was arguably the war’s most revolutionary tank design.

United Counties Buses David Beddall 2020-08-19 United Counties Buses □ A Fleet History begins by taking a brief look at the expansion of the United Counties Omnibus Company since its formation in September 1921 through to its demise in October 2014. The company acquired over fifty independent operators between 1922 and 1938 giving the company prominence in Northamptonshire and surrounding areas. May 1952 saw the fleet double in size with the acquisition of the Midland area of the Eastern National Omnibus Company, encompassing Bedfordshire, north Buckinghamshire and north Hertfordshire. The National Bus Company split United Counties into three operating companies in 1986, United Counties, Luton & District and MK Citybus, halving the size of the fleet. After being acquired by the Stagecoach Group in 1987, the company was largely left untouched. The main focus of the book looks at the vehicles operated by the company, covering the numerous types operated by United Counties themselves. The various liveries, both fleet and advertising liveries are also listed with in the book.

Rail Versus Road in Ireland, 1900-2000 Michael Collins 2000 In 1900 the railways enjoyed an unrivalled monopoly but, within a few years, first urban electric tramways and then bus competition, offered a challenge that had to be faced. This book charts the uneasy relationship between rail and road transport in both parts of Ireland. It details all major reports and enquiries into public transport in the Republic of Ireland and Northern Ireland with pointers to ow transport policy might develop in the 21st century.

The London Volvo B7TL Matthew Wharmby 2021-12-30 At the turn of the century Volvo found itself in a three-way tussle with Dennis and DAF to design and produce Britain's first low-floor double-deck buses. The resulting B7TL was later into service in London than its competitors, but quickly caught up to achieve parity with the Dennis Trident. Two lengths were available and three bodies, by Alexander, Plaxton and East Lancs. Between them, London's TfL-contracted London bus operators took over two thousand Volvo B7TLs between 2000 and 2006, after which noise problems obliged Volvo to develop the B9TL and its later B5LH hybrid. The Volvo B7TLs saw sterling service in the capital for two decades, with the last leaving service in the first week of 2021.

Beyond Oil and Gas George A. Olah 2011-08-24 The world is currently consuming about 85 million barrels of oil a day, and about two-thirds as much natural gas equivalent, both derived from non-renewable natural sources. In the foreseeable future, our energy needs will come from any available alternate source. Methanol is one such viable alternative, and also offers a convenient solution for efficient energy storage on a large scale. In this updated and enlarged edition, renowned

chemists discuss in a clear and readily accessible manner the pros and cons of humankind's current main energy sources, while providing new ways to overcome obstacles. Following an introduction, the authors look at the interrelationship of fuels and energy, and at the extent of our non-renewable fossil fuels. They also discuss the hydrogen economy and its significant shortcomings. The main focus is on the conversion of CO₂ from industrial as well as natural sources into liquid methanol and related DME, a diesel fuel substitute that can replace LNG and LPG. The book is rounded off with an optimistic look at future possibilities. A forward-looking and inspiring work that vividly illustrates potential solutions to our energy and environmental problems.

The US Army in the Vietnam War 1965–73 Gordon L. Rottman 2013-02-20 This book provides detailed information about how US Army units were organised and operated in America's longest war. Vietnam Special Forces veteran Gordon L Rottman examines the different types of infantry battalions and the units that supported them, their training and organisation down to platoon level. Aspects of the US Army's conventional and unconventional warfare doctrine are also addressed, along with a discussion of how replacements were trained and integrated into units. Among other areas of the US Army's involvement covered are individual and crew-served weapons, artillery, armoured fighting vehicles, transport, logistics, the complex chain of command, and combat operations.

Sherman Tanks of the Red Army Peter Samsonov 2020-12-21 More than 4000 examples of the famous diesel-fueled M4A2 Sherman tank were sent to the Soviet Union during the Second World War under the Lend-Lease program. These American-built vehicles were operated by Red Army crews against the Germans during some of the bitterest fighting on the Eastern Front - yet despite serving with distinction and being well-liked by their crews, relatively little has been written about these vehicles until now. Tank expert Peter Samsonov looks at the origins of the M4A2 in Soviet service and the machines that were received from the US as well as providing a detailed assessment of how they fared in combat on the front line.

The London Dennis Trident Matthew Wharmby 2021-07-21 Propelled towards the end of the 1990s by accessibility imperative requiring low floor buses both in London and the rest of Britain, Dennis developed a tri axle Trident double decker for Hong Kong and then adapted the design as a two axle version for Britain. Orders came thick and fast between 1999, when the first Tridents for London entered service

with Stagecoach and 2006, when the Enviro 400, a combination of its unified body builders, replaced it. In those years over two thousand of the type appeared in London, ordered by Stagecoach, First London, United, Metroline, Metrobus, London General, Blue Triangle, Connex, Armchair, and Hackney Community Transport. The body work was by Alexander ALX400, Plaxton, (Precedent) and East Lancs, to two available lengths, while badging itself progressed although Trans Bus, until this troubled organisation was suspended in 2004 by today's Alexander Dennis. Versatile and personable, the Trident in all its forms lasted two decades in London, the last examples being withdrawn from service in 2020.

An Introduction to Homogenization Doina Cioranescu 1999 Composite materials are widely used in industry: well-known examples of this are the superconducting multi-filamentary composites which are used in the composition of optical fibres. Such materials are complicated to model, as different points in the material will have different properties. The mathematical theory of homogenization is designed to deal with this problem, and hence is used to model the behaviour of these important materials. This book provides a self-contained and authoritative introduction to the subject for graduates and researchers in the field.

Management Richard L. Daft 2015-01-01 MANAGEMENT, 12E includes several innovative pedagogical features to help students understand their management capabilities and learn what it's like to manage in an organization today. Each of the 19 chapters begins with an opening questionnaire that engages the reader's interest, directly connects to the topic of the chapter, and enables students to see how they respond to situations and challenges that real-life managers typically face. A New Manager Self-Test in each chapter provides students with further insight into how they would function in the real world of management. The Remember This bullet-point summaries at the end of each major chapter section give students a snapshot of the key points and concepts covered in that section. The end-of-chapter questions have been carefully revised to encourage critical thinking and application of chapter concepts, and Small Group Breakout exercises give students the opportunity to apply concepts while building teamwork skills. Ethical dilemmas, all-new end-of-chapter cases, and a fully updated set of On the Job video cases help students sharpen their diagnostic skills for management problem solving. The chapter sequence in MANAGEMENT is organized around the management functions of planning, organizing, leading, and controlling. These four functions effectively encompass management research and the characteristics of the manager's job.
